Assignment 1114 Feedback

Andrew R. Kowalczyk

frodosamoa

3a — Nicely done! Your code displays further progress in knowing how user interfaces are constructed. (+)

3b — Your touch event handling implementation works great, and the “minimum box size” check is a nice addition outside of what was assigned. (+)

3c — Your code demonstrates good adherence to MVC. (+)

3d — You have successfully broken down two high-level actions, box creation and box deletion, into appropriate lower-level touch events. Box deletion has a small loophole in its out of bounds detection (see the inline comments), but otherwise everything is great. (+)

4a — Your code is functional on all counts except for the small out-of-bounds loophole. (+)

4b — Your code is separated well, including MVC. (+)

4c — Your code is very readable, indented correctly, with generally descriptive names and comments. I did catch one tab character still lurking, in *boxes-touch.css*. See if you can find it :) (+)

4d — Your work shows good use of available resources, both in class and outside. (+)

4e — Your commit frequency and messages are appropriate and descriptive, respectively, for an assignment of this scale. Well done! (+)

4f — Submitted on time. (+)
